EDUCATION

Bachelor of Science in Informatics | University of Washington - Seattle Sep. 2018 - Dec. 2022
Focus Area: Software Development (in-major GPA: 3.91)
Programming Coursework: Data Structures & Algorithms, Hardware/Software Interface, Computer Vision & Artificial Intelligence, Machine Learning
Informatics Coursework: Full-Stack Web Development, Software Architecture, Mobile Application Development, Systems Design, Database Design & Management, Design Methods, Ethics & Policy

EMPLOYMENT

Software Engineer, Intern | Booz Allen Hamilton - Seattle, WA July 2022 – Present

- Designed authoritative multiplayer game server architecture for a mixed reality application
- Ensured thread safety for datagram (UDP) message reception through message queuing and locking
- Improved framerate on mixed reality device (Microsoft HoloLens 2) by 45% through computation offloading, algorithm optimization, and object pooling
- Leveraged knowledge in client/server architecture, transport protocols (UDP and TCP), concurrency and parallelism, programmed and debugged in C# using Visual Studio, Unity Profiler, and HoloLens MR Portal

Software Developer, Student Researcher | Seattle Children's – Seattle, WA Jan. 2021 – June 2022

- Created and validated a patent-pending automated image screening algorithm for arthritis with 95.5% accuracy to the technician assisted method using Python, OpenCV, and Human Pose Estimation
- Established remote testing and development in Linux HPC system using Docker and bash scripts
- Implemented mobile photo capture and upload pages for the REST API using Dart and Flutter
- Leveraged knowledge in Mobile Application Development and Computer Vision, programmed using Python and Dart, and debugged using Visual Studio Code

TECHNICAL PROJECTS

Personal Website: jasonpyke.me (for additional information and projects)

Mobile Game: Coalition – Multiplayer FPS Jul. 2014 – Jun. 2021

- Created a real-time multiplayer video game using a client authoritative model with over 4 million downloads, leveraging multilingual support and a REST API for dynamic content delivery
- Created a 'progression system' by tracking gameplay metrics and interfacing with Google's Play Games Services Management API to upload and cache user save data
- Utilized: C#, JavaScript, Node.js, Unity, Local Persistent Data, Cloud Storage, Caching, Json.NET

Mobile Game: Rampage Road Dec. 2016 – Present

- Developed a revenue generating open-world Android game with over 7 million downloads
- Utilized the C# Jobs System to implement an efficient multithreaded A* pathfinding algorithm using a weighted graph and extrinsic priority queue
- Utilized: C#, Unity, Local Persistent Data, Cloud Storage, Caching, Json.NET

Resume Quest (resumequest.careers) Dec. 2021 – Jun. 2022

- Developed an interactive resume tailoring tool using TypeScript for screening job listing descriptions
- Established a REST API for storing and fetching results, incorporated document-based persistent storage
- Utilized: Next.js, TypeScript, MongoDB

Flights Database Design & Implementation (github.com/pyke-jason/sql-flights)

- Developed and populated a database for an airline's flights database using stored and insert procedures, business rules, synthetic transactions, and complex queries
- Utilized: SQL, MS SQL Server 2019

SKILLS

Software: (proficient): Java, C#, Python, C, Typescript, JavaScript, SQL (familiar): C++, HTML/CSS, Go, Dart, R
